Questionnaire	Response (✓/X/N/A)	Comment
No immediate food safety risk is present (e.g., livestock/poultry slaughter activities) when product is produced, handled, packaged, stored, or held under conditions that promote or cause the product to become contaminated.	N/A	
No animal/bird/human feces and/or presence/evidence of rodents is observed on food contact surfaces in use, and/or in/on product, during handling, packaging, and/or storage of food products.	N/A	
Production site and surrounding assessment: To the best knowledge, the field does not occupy ground previously used as landfill or other types of waste disposal.	N/A	
Agricultural chemicals are used as per the regulation. The spray equipment has been properly maintained and calibrated. Standard operating procedures have been developed for pesticide application.	Y	
Agriculture chemicals are stored in designated areas and under proper conditions.	Y	
Agricultural water is not a source of contamination. Untreated sewage water is not used.	N/A	
The production site and equipment are clean and maintained. The appropriated cleaning methods and materials are used. No potential source of product contamination.	Y	
The equipment condition does not contribute to contamination of product.	Y	
Proper waste management is followed. Areas for garbage, recyclables and compostable must be identified and waste must be stored and disposed of in a manner to minimized contamination.	Y	
The workers are trained in their area of responsibility relevant to good agricultural practices and a record of training is kept, when possible.	Y	
If applicable, products are transported in a clean and sanitary manner and only compatible products are carried in a load to prevent cross contamination.	Y	
A traceability system is in place and mock recalls is conducted annually to verify the effectiveness of the traceability system.	N/A	
Only food-grade materials are used in the production of the product.	Y
